

BLACKGATE CAPITAL

PORTFOLIO RISK & RISK METRICS REPORT | GENERATED AT: 2026-08-16 20:10:06

1. Account Overview

Portfolio Equity (Net Value):	\$98,212.86	Free Cash Capital:	\$72,985.36
Option Buying Power:	\$276,666.68	Brokerage Connection:	Alpaca Paper (Verified)

2. Value at Risk (VaR) Analysis

Value at Risk (VaR) estimates the maximum potential loss in the portfolio over a 1-day holding period at a specific confidence level based on historical daily volatility from the past 30 days.

Confidence Level	Z-Score	1-Day VaR (%)	1-Day VaR (USD Risk)
95% (Standard Risk)	1.645	1.78%	\$1,344.24
99% (Extreme Stress)	2.33	2.52%	\$1,904.00

3. Active Portfolio Positions

Asset Ticker	Quantity	Market Value	Delta	Beta	Asset Class
AMZN	-50.0	\$-13,132.50	1.00	1.20	Stock / ETF
BAC	-50.0	\$-3,224.50	1.00	1.00	Stock / ETF
GOOGL	-10.0	\$-3,459.00	1.00	1.15	Stock / ETF
NFLX	-50.0	\$-3,908.00	1.00	1.00	Stock / ETF
SOFI	100.0	\$1,829.00	1.00	1.00	Stock / ETF
SOFI260904C00020500	-1.0	\$-18.00	0.03	1.00	Option Contract
SPCX	-10.0	\$-1,400.00	1.00	1.00	Stock / ETF
SPY	25.0	\$19,408.50	1.00	1.00	Stock / ETF
V	80.0	\$29,132.00	1.00	1.00	Stock / ETF

4. Macroeconomic Stress Testing Scenarios

Historical or hypothetical shock simulations applied to the underlying values of the portfolio assets. Option re-evaluations are computed using Delta approximations.

Stress Scenario	Underlying Description	Stressed Portfolio Value	Estimated Loss (USD)	Impact (%)
-----------------	------------------------	--------------------------	----------------------	------------

	S&P; 500 loses 20%. Flight to safety pushes Bonds (TLT/IEF) +5%. High beta stocks fall heavily.	\$20,817.27	\$-4,410.23	-17.48%
	US Interest rates surge 150bps. Bond prices plunge: TLT falls 24%, IEF falls 11%. Equity markets contract 10%.	\$23,022.38	\$-2,205.12	-8.74%
	CPI spikes. Commodities (GLD/USO) jump +15%. Tech stocks sell off -15%. Bonds fall -8%.	\$21,919.83	\$-3,307.67	-13.11%

5. Strategic Recommendations & Actions

Portfolio Risk Profile: Detected active short option call exposures (e.g. Option A Call leg). Under severe upside shocks or interest rate cuts, these naked short legs pose substantial unlimited risk. Ensure a strict stop-loss orders are placed at 5% above underlying strike. Consider purchasing an out-of-the-money Call option to convert the naked short call into a Bear Call Spread / Iron Condor structure.
